About

I work in the Technical Service Department at Rocksure International Limited, on the Perseus Mine site in Ayanfuri. My days are shift handovers, hazard reports, fleet planning calculations and equipment productivity analysis. I have also worked with the blasting crew, stemming holes and loading emulsion, so I know how the numbers on paper turn into work on the bench.

Based in

Ayanfuri, Ghana

Department

Technical Service

Site

Perseus Mine

Also codes in

Python

What I do

Safety reporting

Spotting hazards, writing them up clearly and logging them in the site hazard report book.

Fleet planning

Working out how many trucks and loaders a shift needs to hit its targets.

Productivity analysis

Turning shift data into figures that show how equipment is performing.

Shift handover

Passing on equipment status, open issues and risks so the next crew starts informed.

Experience

National Service, Technical Service Department

Rocksure International Limited, Perseus Mine, Ayanfuri

Supporting day-to-day technical work: handover notes, hazard reports, fleet calculations and equipment productivity analysis.

Blasting crew support

Perseus Mine, Ayanfuri

Assisted the blasting crew with stemming and loading emulsion.

Projects

Hazard reporting tracker

An Excel tracker built alongside the site hazard report book to log and follow up reported hazards.

Excel

Fleet planning calculations

Calculations that match truck and loader numbers to shift

targets and haul conditions.

Excel, mine planning

Equipment productivity analysis

Shift-by-shift analysis of how equipment is performing against plan.

Data analysis

Automated trading bot

A personal Python project that trades automatically from a set of rules.

Python
